Employ technology that enhances the clinical and patient experience and preserves IT compliance.

Technology in healthcare is evolving. Organization's must enable devices for multiple use cases, securely connect users and data, and manage a diverse threat landscape. Each year, more healthcare organizations choose Apple to help achieve these goals.

Managing and securing Apple in healthcare

Jamf bridges the gap between what Apple provides and what healthcare organizations need to support patients, clinicians and other end users. We offer enterprise-secure and consumer-simple solutions that drive productivity, protect personal privacy, and keep devices and users compliant.

With Jamf, you can:

- Empower providers to work from where they need with powerful security capabilities that protect organizations and users without impacting productivity.
- Improve the patient bedside experience with streamlined care team and personal communication, secure access to medical records and entertainment options.
- Provide secure, private access to clinical apps, PII (personal identifiable information) and systems on corporate- and personally-owned Apple devices.
- Extend and integrate Jamf with our comprehensive API and robust network of marketplace partners.

Ensure that each person feels supported, safe and empowered whether providing or receiving care.

Patient bedside device management

Healthcare Listener – an EHR integration – automatically wipes iPad and Apple TV of personal patient information and readies the device for the next patient.

Remote device troubleshooting

Help frontline teammates perform basic device management actions without having to contact IT.

Wireless provisioning and app refresh

Jamf Setup and Jamf Reset streamline shared device use customized to its end users.

BYOD, 1:1 and shared devices

Meet specific deployment scenarios needs for all deployment models. Support frontline workers' shared device needs with Jamf Single Login.

Tap into a better solution

Jamf offers flexible, scalable solutions for any device, application or security use-case. Manage and secure any Apple device with our industry-leading technology platform.

Mobile Device Management (MDM)

Automate and scale ongoing device management and security tasks.

Endpoint protection

Purpose-built for Apple, protect devices from threats to keep organization and personal data safe.

Application management

Increase end-user productivity with automated workflows to update and deploy apps.

Threat prevention and remediation

Prevent cyber threats such as phishing attacks that can put organizational or personal data at risk.

Identity and access management

Provide users with a seamless log-in experience from onboarding to access with one set of cloud identity credentials.

Content filtering and safe internet

Privacy-focused content filtering gives organizations powerful tools to control what kind of content is accessed on work devices while ensuring personal data is not inspected.

Zero Trust Network Access (ZTNA)

Offer secure access to business resources and applications.

Security visibility and compliance

Validate that devices meet specific compliance requirements and react immediately if anything deviates from baseline.

Healthcare and technical experts

Jamf's dedicated healthcare and technical teams work with your organization to provide wide-ranging expertise to help your organization find the solution that best fit your needs.
