

Jamf and Okta share a vision of modern cloud identity for an uninterrupted, native login experience on Apple devices. Our integrated technology allows us to provide unified identity access across apps, secure access to company apps and a fast, identity-led onboarding experience for modern, seamless identity management.

Trusted Access

Trusted Access is a zero trust outcome for Apple that combines the best elements of device management, identity, connectivity and endpoint security into a cohesive whole that is stronger than the sum of its parts.

Device Management is the foundation of Trusted Access, enabling secure enrollment for company-owned and BYO devices.

Deployment is simple and requires fewer sign-ins during setup.

Identity and Access Management with Okta as the identity provider, users access all apps and resources with a single credential, saving time for both IT and employees.

Endpoint security ensures only trusted devices gain access to company resources. Okta and Jamf adjust permissions based on device risk and compliance, securing both new and active sessions against unauthorized access.

Jamf for Mac + Okta

Jamf for Mac combines Jamf's device management, IAM and endpoint security into a single solution, fully integrated with Okta. Together, they deliver passwordless login, Zero Trust access, and continuous compliance for Apple devices. Employees enjoy seamless enrollment and simple, secure access, while IT gains stronger security with less complexity.

With Jamf and Okta, organizations can:

- Unify management, identity, and security with Jamf for Mac + Okta — the best-of-breed Mac solution for the enterprise.
- Provide seamless access to apps and company resources through Okta, using a single identity across all Apple devices.
- Simplify deployment and onboarding with Enrollment Single Sign-on (ESSO) and zero-touch workflows
- Strengthen authentication with Okta FastPass passwordless login, Apple biometrics (Touch ID/ Face ID), and secure Platform Single Sign-on (PSSO).
- Ensure device trust and compliance by validating Jamf-managed devices before granting access.
- Adapt access in real time with continuous conditional access, adjusting permissions when device posture, security, or compliance status changes.

Integrations

With Okta as the identity provider and Jamf as the management and security solution, joint customers can offer their end users seamless uninterrupted, productive workflows anywhere and anytime. Here is how Jamf and Okta integrate to achieve this:

| Integration | Description | Jamf solutions | Okta solutions |
|--|---|--|-------------------------------------|
| MacOS account provisioning and password sync | Create local Mac user accounts on managed devices that authenticate users with their Okta credentials and keeps their password in sync. Having the user's cloud identity bound to their device gives IT granular control over access and permissions and simplifies ongoing authentication for end users, keeping them productive | Jamf Connect Jamf Pro or Jamf School | Okta Identity Cloud |
| Enrollment SSO (ESSO) for iPhone and iPad | thanks to uninterrupted workflows. Designed to make user enrollment faster and easier, ESSO reduces the number of sign-ins required of a user when enrolling into devices. By installing Okta Verify, new employees no longer need to worry about repeated authentication during and after the enrollment process. | Jamf Connect Jamf Pro or Jamf School Jamf BYOD | Okta Identity Cloud/ Okta Verify |
| Platform Single Sign-on (PSSO) for Mac | End users can access all relevant applications on a Mac device by signing in only once, reducing the number of requests for users to enter the same credentials repeatedly for every app. Leveraging PSSO increases efficiency, user productivity and security by reducing the risk of authentication errors. | Jamf Connect Jamf Pro or Jamf School | Okta Identity Cloud |
| Passwordless authentication with Okta FastPass | Okta FastPass can be enhanced with Touch ID or Face ID, Apple's native on-device biometric security that is even faster and more phishing-resistant than previous MFA workflows requiring password and out-of-band authentication methods such as SMS, email, or push notifications. | Jamf Connect Jamf Pro or Jamf School | Okta Identity Cloud/Okta Verify |
| User/Group Synchronization | Jamf Pro can access users and groups stored in Okta through Okta's LDAP interface, eliminating the requirement to connect MDM to Active Directory. In addition, when enabled, Jamf Pro or Jamf School can assign customized content and policies to devices that belong to users who are members of particular LDAP groups. | Jamf Pro or Jamf School | Okta Identity Cloud |
| Automations for user identities | Okta Workflows provide a codeless, drag-and-drop platform to automate the processes of onboarding and offboarding employees. These workflows can work with any API to centralize coordination of IT tasks such as adding new employees to user groups or ensuring former ones don't have access to systems. | Jamf Pro | Okta Workflows |
| Continuous conditional access with Shared Signals Framework (SSF) | Okta continuously adjusts user access based on changes in device risk and management status from Jamf, leveraging the Shared Signals Framework to share and act on these updates in real time. | Jamf Pro Jamf Protect | Okta Identity Threat Protection |
