

Activation Lock Bypass in two easy steps

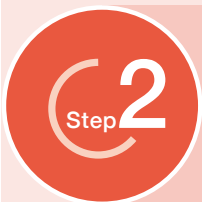

Apple ID issues? Not anymore.

Don't continue fretting over Activation Lock on your managed iOS, iPadOS and T2 chip-enabled macOS devices. As the many scenarios that require you to access locked devices arise — be it departure of an employee or a simple “I forgot my password” scenario — Jamf is the key to getting your managed Apple device unlocked and back in the fold.

When Activation Lock asks for the password you don't have:

In your Jamf instance, select **“Action”** in the Device menu and **“Show bypass code”** associated with the managed device

Type the code on the device in place of the password or copy/paste via Apple Configurator

When you're ready to take advantage of Jamf's security features, sign up for a free trial, or contact your preferred Apple reseller to get started.
