Get set up in just a few guided steps
From setup to security, we'll guide you through each step to help your team start strong.
Continue Setup
Get Started
Prepare Your Environment
Set up your Jamf ID
Create or connect a Jamf ID so you can sign in and begin device onboarding.
Task completed
Prepare Your Environment
Enabling Self Service+ for macOS devices
Self Service+ is deployed for use on all of your macOS devices.
Task completed
Prepare Your Environment
Register and connect Apple Services
Add your APNs certificate and ABM tokens to sync and manage Apple devices and apps.
20 mins
Get started
Prepare Your Environment
Choose enrollment method
Select from automated, user-initiated, or manual enrollment options.
Prepare Your Environment
Enable app content tokens
Enable the ability to upload tokens to your MDM server to begin assigning content.
Deploy & Finalize
Enroll a device
Enroll your first device to start seeing data
Activity
MacBook Air (M2, 2022) has been enrolled with enrollment / 11 days ago
iPhone 13 has been enrolled with enrollment / 11 days ago
how can I ensure all of my devices are automatically updated to the latest OS version?
I'll help you set up automatic OS updates for all your devices in Jamf Pro. Let me get the most current information on configuring this across your entire fleet.
Looking up comprehensive automatic OS update configuration for all device types.
Ask a question...
AI can make mistakes. Jamf recommends double-checking provided information.
UI

Dashboard
Computers
Devices
Users
Blueprints
Compliance
Settings
Dashboard
Third-Party Keyboards Allowed — Could enable keystroke logging of sensitive input
Dangerous Entitlements Requested — App requests overprivileged permissions
Missing iOS Privacy Manifest — Non-compliance with Apple's privacy declaration requirements
Missing Accessed API Types Declaration — Required disclosure of privacy-sensitive APIs absent
Sensitive Data Transmitted — Data flows observed over the network include sensitive information
Protected Resources Requiring Consent — App declares access to multiple sensitive device resources
AI / Other
On-Device AI Usage — Local AI/ML models present risks around reverse engineering and misuse
Custom URL Schemes — Susceptible to hijacking by other apps on the same device
Keychain Interactions Observed — Keychain usage patterns warrant additional security review
Recommendation
Given the D rating and the RESTRICT recommendation, this app poses significant risk in a managed environment. Based on this assessment, you may want to consider the following actions in Jamf Pro:
Block the app via a Restrictions configuration profile on supervised devices
Add it to a Restricted Software list to prevent installation on managed iOS devices
Alert users through a Self Service notification if the app is detected in inventory
Would you like help setting up any of those controls in Jamf Pro?
Which devices in our inventory have this app installed?
AI can make mistakes. Jamf recommends double-checking provided information.
