

Jamf in Financial Services

Driving mobile transformation in finance.

Unlock the full power of mobile — secure, compliant and ready for business.

From bank branches to trading floors to insurance adjusters, financial services organizations are looking to innovate business operations and power client interactions with mobile devices. But with growing regulatory requirements, evolving cyber threats and the push to modernize, technical teams face:

- Complex compliance mandates (e.g., GLBA, PCI DSS, SOX)
- Fraud and external cyber risks
- Insider threats
- Distributed and diverse workforce
- Legacy systems
- Downtime and non-compliance

To meet these challenges, financial organizations need more than devices; they need a mobile-first solution that delivers automation and gives technical teams full visibility and control while simplifying the user experience.

"Jamf streamlines the management of our entire fleet. With its support for custom scripts, configurations, blueprints, profiles, and device management, we are able to efficiently scale our operations and enhance the protection and oversight of our devices."

— Enterprise Customer
(1,000+ employees),
Financial Services Industry

Trusted by leading financial organizations, Jamf helps meet strict regulatory and security standards. By uniting device management, security and identity, Jamf enables insurance, brokerage, and retail banking teams to maximize the power of mobile — while addressing each sector's unique compliance and security needs.

Insurance

- Stay compliant with **automated updates and instant device lockdown**.
- Stop fraud and data loss with **Zero Trust Access, app risk vetting and threat defense**.
- Ensure devices are instantly ready for claims and onboarding with **zero-touch deployments**.
- Protect sensitive data with **identity-driven access** for authorized users only.
- Enable simplified workflows with paperless processing and **secure digital badging**.

Brokerage and Consulting

- Meet mandates (SEC, FINRA) with **automated monitoring and device lockdown**.
- Protect portfolios with layered defense and **Zero Trust security**.
- Keep advisors productive with the tools they need with **secure app deployments**.
- Ensure uptime through **automated patching and device health checks**.
- Deliver modern experiences via **self-service app stores, digital badging and remote access**.

Retail Banking

- **Enforce compliance across all devices** for PCI DSS, SOX, NYDFS-500 and more.
- Safeguard customer trust with **phishing, malware and data-loss protection**.
- Transform branches with **zero-touch deployments and secure staff workflows**.
- **Serve clients faster with ready-to-use devices** for signatures, reviews and self-service.
- Streamline operations with **self-service app stores, digital badging** and reduced legacy reliance.

Through [key partnerships and integrations](#) via Jamf API, Jamf helps financial organizations maintain compliance, prevent fraud and empower employees. With identity and Zero Trust capabilities, only verified users and compliant devices access critical systems. Jamf streamlines deployments, enforces compliance and supports Infrastructure as Code and DevOps workflows — so teams can work securely, anywhere, with confidence.
