Bring on the latest and greatest

With every major operating system (OS) release, Apple unleashes exciting new features that enhance the user experience. These also come with improvements to device management and security, so IT and security teams must understand the timing, end user impact and feature compatibility that keep workflows running.

Choose the right partner to help you upgrade

Successfully deploying or upgrading a new Apple OS requires compatibility and key feature support from device management and security vendors – resulting in fewer issues. And fewer issues mean a system that is better managed with more complete security controls in place.

Jamf is that right partner with over 20 of Apple experience and an unmatched reputation of same-day Apple OS support.

- Verify the compatibility of a new OS with organizational infrastructure, ensuring the best upgrade results without impeding end-user, IT and security workflows.
- Determine who will upgrade – the user or IT – with simple yet powerful workflows. If you are not ready to upgrade, defer updates for up to 90 days when using a management solution like Jamf.
- Prepare end users with information to decrease the amount of help desk tickets.

Jamf Update Workflows

Blueprints

Blueprints simplify the management of Apple devices. Powered by the Declarative Device Management (DDM) protocol, blueprints help you upgrade Mac, iPhone and iPad with a structured workflow approach, the ability to combine multiple steps in one process and simplifies complex deployment scenarios.

Managed Software Updates

Schedule upgrades using managed software updates, also powered by DDM, which allows you to easily target a specific OS version and update deadline to a group of devices in one action.

Mass Action OS Updates

You can use a mass action command to upgrade an individual computer or group of computers.

Upgrade with a better solution

It's important that solutions are aligned with Apple. Since Apple is always running a beta, pairing [Appleseed for IT](#) with access to Jamf's beta program will help make an early-access program a reality within your organization.

Manage and secure Apple at work

But simply keeping devices up to date with the latest features isn't enough. It's what organizations do with the devices that makes the difference for their users. You need a platform that delivers device management and security solutions all in one. [Learn how Jamf takes this belief and brings it to life.](#)

Get the solution that is right for you

Jamf for Mac

Boost productivity and reduce risk across your Mac fleet.

Jamf for Mobile

Secure your mobile workflows and transform how employees work.

Jamf for K12

Purpose-built Apple device management and security solutions for schools.

Jamf for SMB

Stay focused on your business, not on device management.
