

Automated device distribution to save time

GRS Group
CALIFORNIA, USA

THE CHALLENGE

The GRS Group is a commercial real estate services provider in California. Full-time employees are issued Apple iOS devices and GRS Group's corporate network doesn't support anything else.

When Marc Schnitman joined GRS Group in 2013, Apple devices had already been deployed throughout the company. In terms of management they relied on ID stickers. This manual model was extremely challenging because they didn't have a centralized delivery method. It was a one-to-one scenario: contact the end user, walk them through the installation, then repeat over and over for more than 50 employees. It was very time consuming.

THE SOLUTION

Jamf Now allowed Marc to have a centralized delivery method for easier management of the company's devices. "The first time I set up Jamf Now, it was extremely easy to do. The interface was easy to use, and deployment was very simple," said Marc.

Jamf Now was built from the ground up to do the heavy lifting of device management, so that you don't have to. Many people find themselves trying to setup, manage, and protect their company's Mac, iPhone, iPad, and iPod devices manually. Jamf Now is a simple, intuitive way to manage Apple devices, and help people take back their nights and weekends.

"Jamf Now changes my interaction with our Apple devices from one- on-one to an at-a- glance dashboard view."

– Marc Schnitman, IT Administrator
