

Five Ways To Do More With Mobile Devices

1.

Deploy devices tailored to your users

9:41 AM

Deliver the right mix of apps and configurations for each role. Layer security with a seamless experience users enjoy.

2.

Secure and manage your apps and data

9:41 AM

Track vulnerable app versions, monitor OS updates, and block unauthorized apps. Enable Zero Trust Network Access so only trusted users on secure devices can access work resources.

3.

Enable safe remote access to critical resources

9:41 AM

Integrate with cloud identity providers to manage permissions and access across all systems and devices. This ensures employees can securely connect to the apps and resources they need, when they need them most.

4.

Implement device hardening for security

9:41 AM

Use zero-touch deployment to configure devices, enforce security settings, manage updates and patches, and maintain compliance baselines.

5.

Go beyond traditional management frameworks

9:41 AM

Jamf for Mobile delivers mobile-optimized solutions built for Apple, but flexible enough for any fleet. It unifies identity, mobile security, device management and automation to unlock powerful, productive user experiences.
