Mac lifecycle from onboarding to offboarding:

Increase Mac ROI and efficiency with Mac lifecycle management

Proper Mac lifecycle management can save organizations time and money. It maximizes end-user productivity and takes advantage of the high resale value of Mac. Streamlining this process increases operational efficiency and Mac ROI.

Here's how to do it right.

1 Onboarding
Efficient, zero-touch onboarding ensures productivity from day one.

Enroll Mac devices

Simplify initial device setup for multiple devices with Automated Device Enrollment through Jamf Pro's Apple Business Manager integration.

Set initial configurations

Set **policies, configurations, security** and **compliance** baselines appropriate to specific user groups with Jamf Blueprints or compliance benchmarks.

Install apps

Assign apps from Jamf's app catalog appropriate to each user group, set to install during **Setup Assistant**.

Offer automated enrollment

All configs, policies, and apps will load at boot up, giving new hires everything they need to begin work right away.

2 Mid-lifecycle management
Strong device, app and security management keeps everything secure and running smoothly.

Deploy Self Service+

Allow users to access pre-approved apps they need without needing to file an IT ticket.

Automate updates and patching

Remove human error and late, unsafe updates and patches by automating with **App Installers**.

Optimize devices

Ensure devices are running at peak performance with regular audits and automated reporting.

Monitor compliance

Perform security and compliance audits and automate ongoing compliance with Jamf Pro.

3 Secure offboarding
Ensuring a proper sendoff is essential to secure business data, protect networks and save money otherwise spent on unused app licenses.

Automate your offboarding workflow

Revoke access, close accounts and reclaim licenses with pre-set scripting, web books, Smart Groups and Jamf's API.

Wipe data securely

Ensure that all data is secured and completely removed from the device with Jamf Pro's lock and wipe; remove from ABM/ASM.

Device reassignment or resale

If a new employee will use the device or you chose to resell, performing a wipe sets it back to square one: onboarding.
