

# Top 10 reasons Jamf is best in class(rooms)

## 1 It's a total solution, purpose-built to manage and secure Apple devices and optimize learning.

We help education institutions of all sizes use Apple technology to deliver transformational teaching and learning anywhere. Because Jamf offers both management and security, you get everything you need to maximize your investment in Apple. Our framework offers endpoint protection, network threat prevention, content filtering and identity and access solutions focused on Apple.

## 2 Jamf Safe Internet keeps students safe and their information private.

Centered around privacy for students, **Jamf Safe Internet** helps schools keep students safe by blocking harmful or adult content. Another ever-increasing issue facing educational institutions is cybercrime—including phishing, malware and ransomware. Jamf protects both your network and end users.

## 3 Jamf's Google alliance partnership helps students and staff stay productive.

Jamf has a dedicated team that works closely with Google to develop meaningful integrations across Google Workspace for Education and Google Cloud Identity. We support the integration through Apple School Manager and federated IDs to provide access and identity to student devices. Jamf Safe Internet's support for Google Chromebook means your district or campus stays safe online, no matter which devices they use.

## 4 Jamf's Microsoft alliance partnership enhances learning with Microsoft tools on iPad.

Numerous schools and institutions continue to use Microsoft tools and services to elevate their educational experience. **Jamf goes beyond merely supporting these tools.** We support the integration of Microsoft Office 365 through Apple School Manager and federated IDs to provide access and identity to student devices. This enables iPads to use the Microsoft tools that schools have access to while ensuring that devices are deployed and configured to be most effective in the classroom.

## 5 Jamf apps enable teachers and parents to keep students focused and safe online.

The **Jamf Teacher app** enables teachers to not only prepare lessons with specific apps and web pages but also prevent distractions by limiting both apps as well as select device functions. During class, for immediate attention, teachers can use the attention screen to lock students out with a custom message. Jamf Teacher also allows educators to send direct messages to individuals or groups of students.

When school is over, the **Jamf Parent app** allows parents to keep students focused on homework by modifying access to games and limiting social media use. Parents can also enable location notifications to alert them when students arrive at school or home.

## 6 Jamf Student encourages students to communicate their needs and help themselves.

The **Jamf Student app** neatly organizes content so students can easily find apps, books and documents in their library. When they have questions, learners simply message their teachers. For times they need a little more help, they can virtually raise their hands to ask the teacher to come to their desks.

## 7 Jamf Assessment easily delivers proctored exams on iPad.

With features like screenshot detection, camera enablement and custom exam URLs, **Jamf Assessment** allows you to easily proctor a remote exam on any modern video conferencing platform.

## 8 App Installers and Patch Management monitoring manage your entire application lifecycle.

Beyond offering **Self Service** with automated workflows for deploying and updating apps, Jamf also provides tools to help you deploy any type of software and keep them updated in the most secure way. The **Jamf App Catalog** features over 1100 app titles and versions, with 127 apps available via **App Installers**. We streamline the app lifecycle process so that IT admins don't have to manually monitor, package, and update apps.

## 9 Smart Groups and extension attributes turn device inventory data into actionable automation.

Jamf offers **extension attributes** to help you create the picture you're looking for about your Apple devices. You can set up policies to collect inventory data or even create custom data points via extension attributes. Once you have all the data, our patented **Smart Groups** create dynamic groupings across your Apple fleet that depend on multiple inventory attributes so you can pin down exactly which devices need what. When a device attribute changes, Jamf Pro does the work for you by dynamically shifting Smart Group membership.

## 10 Jamf Setup and Jamf Reset allow seamless and secure device sharing.

When you use **Jamf Setup and Reset** with Jamf Pro, you can provide seamless shared device experiences for students and staff. Uses range from libraries to computer labs, loaner devices to the campus police force, residential hall check-ins to on-campus retail stores or sports stadium purchases. Securely provision and share devices with a single tap to select the configuration/role. When finished, tap on Jamf Reset to wipe and reset the device so it's ready for the next user. **Return Device to Service** is also available in both Jamf Pro and Jamf School to simplify the reset process.

## Beyond the top 10: the evolution of modern education

This top 10 list is just a brief introduction to the **ever-evolving ways Jamf can support you** as you integrate technology into the learning process to empower student success.
