

# Jamf Protect Sub-processors

Jamf may engage vendors to provide services on our behalf. Any vendor who may process Customer Content, as defined in Jamf's [Software License and Services Agreement](#) (SLASA), are considered sub-processors and are disclosed below. As set forth in Jamf's [Data Processing Agreement](#) (DPA), Jamf has adequate data transfer mechanisms in place with each sub-processor.

Jamf Protect consists of MacOS Endpoint Security, Internet Content Filtering and Usage Controls, and Mobile Endpoint and Network. Data will be processed and stored in different locations depending on the functionality that our customers enable.

## Jamf Protect MacOS Endpoint Security

Sub-processor	Location(s) of processing	Purpose of processing
Amazon Web Services, Inc.	Australia, Germany, Japan, United Kingdom, United States	Cloud Hosting*

T-Systems International GmbH	Germany	Regional edge services**

\* The countries listed are the sub-processor’s locations from which this Jamf product’s hosting is made available. Customers may choose the specific location in which they would like the product hosted.

\*\* The countries listed for regional edge services are dynamically chosen based on proximity to the endpoint.

\*\*\* AI Assistant is disabled by default for all customers. Certain AI Assistant skills may process personal data if enabled by the Jamf customer.

Jamf may use additional sub-processors for customer support – see the sub-processor listing for Jamf Support.
