

Jamf Now

Apple device management focused on small-to-medium-size business.

Jamf Now combines Jamf’s powerful mobile device management (MDM) technology with capabilities for managing, securing and empowering an organization’s end users. Including malware prevention, password sync and the ability to deploy any iPad and iPhone app, everything is designed for simplicity — so no additional training is required.

Jamf Now goes beyond MDM capabilities to provide the most complete yet simple IT solution for businesses needing to manage and secure their entire Apple ecosystem, while securely providing access for employees who simply need to get work done. Jamf Now helps provide the security and identity functionality businesses need when facing modern threats, all within an easy-to-use, intuitive platform to get up and running quickly.

Jamf Now offers everyone:

Quick setup

Get up and running quickly to manage and secure Apple devices in minutes

Ease of use

So easy to use IT isn’t required

Efficiency

Use Blueprints to customize a group of devices, deploying specific apps, restrictions and settings

Jamf Now Features

Jamf Now provides enhanced management, core identity elements and cutting-edge security:

Password Sync

Keep Mac passwords in sync with cloud credentials and enforce password policies from identity providers Microsoft Azure AD and Okta.

OS Updates

Manage operating system updates to update a single device or all devices.

Custom Apps & Profiles

Jamf Now gives you even more flexibility with the ability to deploy custom applications and profiles.

Device Inventory

Keep track of device settings with current details and status reports.

Automatic Setup

Automate device enrollment to eliminate tedious manual setups and configure Wi-Fi settings and company email accounts.

App Distribution

Distribute free apps or ones purchased through Volume Purchasing.

Device Security

If a device is lost or stolen, it can be remotely locked or wiped completely.

Single App Mode

Lock your supervised iOS or iPadOS device to a single app to focus the device for a specific need.

Web protection

Combines web threat prevention and a content-filtering database, on supervised iOS and iPadOS devices, to block unsafe content.

App Installers

Distribute third-party Jamf-verified macOS software titles.
