

Complete the Microsoft stack for Apple.

*Jamf unifies Apple device management and security with Microsoft Sentinel, Entra and Intune — giving IT and Security teams **full visibility** into every Apple device, everywhere.*

Organizations that manage Apple devices in Microsoft environments face security gaps. Identity and access decisions are only as strong as the device signals behind them; without deep Apple-native compliance data, conditional access can't fully enforce zero-trust principles across the fleet.

Security teams that manage Mac, iPhone and Windows devices often work from an incomplete picture as generic cross-platform tools struggle to capture Apple-specific telemetry. Meanwhile, tools built primarily for Windows environments require manual workarounds and deploy to Apple devices slowly.

Generic management drive costs up without proportional value. If that's not bad enough, inconsistent authentication or onboarding as organizations scale up their Apple footprint interrupts productivity.

Jamf + Microsoft = one platform for Apple

Together, Microsoft and Jamf offer joint customers a single, coherent and integrated stack to support their entire workforce. IT teams get unified visibility, security teams get complete coverage and end users get seamless onboarding and everyday work experiences on every Apple device from any location.

Better together, by design

Capability area	Short benefit description
Deploy and manage Apple at scale	Devices arrive configured, compliant and ready to work. Zero-touch deployment is powered by Microsoft Entra ID credentials and Apple School Manager.
Real-time compliance with Entra ID	Apple-native compliance signals feed Microsoft Entra conditional access, automatically restricting access when a device is open to risk.
Seamless identity for every user	Users log in with their Microsoft Entra ID credentials; Jamf automates account provisioning and FileVault encryption.
Deep Apple visibility in Microsoft Sentinel	Apple-native telemetry streams directly into Sentinel, giving security teams one unified view across Mac, mobile and Windows.
Unified security operations with Security Copilot	Jamf's plugin surfaces Apple device context directly in the analyst workflow, speeding up investigation and response.

Customer outcomes

- Close Apple compliance and visibility gaps in the Microsoft stack
- Simplify IT operations with zero-touch deployment and automated enforcement
- Improve employee experience without trading off security

Device Management Integrations	Description	Product Documentation or Marketplace Listing	Jamf Product	Microsoft Product	Customer feedback
LDAP for Querying Users and Groups	Directory information about organization's users (name, email, role, etc.) can be used to ensure the right apps and settings get to the right end users. The Admin doesn't have to recreate this information manually.	Integrating with LDAP Directory Services	Jamf Pro	On-prem Active Directory	
Cloud Identity Provider for Querying Users and Groups	Information about an organization's users (name, email, role, etc.) is found in Cloud IdP now which can be used to ensure the right apps and settings apply to the right users and devices. Connecting this info into Jamf Pro allows admins to not have to insert manually.	Microsoft Entra ID Integration	Jamf Pro	Microsoft Entra ID and Intune (Microsoft Endpoint Manager)	"Easy-to-follow documentation provided by both Jamf and Microsoft. Most straight forward integration I have ever been involved in." I Borota
Dashboard Analytics Reporting	Get everything you need for free to create and save unlimited interactive reports. Use the Jamf Pro Power BI app to bring a deeper level of data analytics to your Jamf deployment. Extend reporting capabilities of Jamf Pro and capture it within your Power BI architecture. Data available: Computer & Mobile Devices, Details, Applications, Extension Attributes and Groups	Power BI	Jamf Pro	Microsoft Power BI	Power BI with Jamf Pro "Power BI integrates seamlessly with Jamf Pro to provide detailed reports on all aspects of your Jamf Pro instance. Set up reports on macOS versions, Virus Definition versions, number of devices per building etc etc. Absolutely love this tool for providing data we can act on." C McBride

Identity and Access Integrations	Description	Product Documentation or Marketplace Listing	Jamf Product	Microsoft Product	Customer feedback
Device Compliance for macOS, iOS and iPadOS	Organizations want to ensure that trusted users are on a compliant device before they allow them to access company materials. This integration allows for Jamf Pro to verify if a device is compliant, and sends that yes/no status to Microsoft. *This replaces Conditional Access starting in Jamf Pro 10.4	Device Compliance	Jamf Pro	Microsoft Entra ID and Intune	"An Integration to make sure access of office data is provided on to the devices which are compliant. Seamless integration between Jamf and Microsoft Entra ID helps us to achieve this security ask. A must to implement solution from an Security point of view." Samstar777
SSO for Cloud Identity	This allows for the Admin(s) at an organization to login to their Jamf Pro instance, Jamf macOS Security Cloud portal and Jamf Security cloud portal, with their Entra ID.	Configuring Single Sign-On with Active Directory Federation Services Microsoft Entra SSO integration with Jamf Pro	Jamf Pro	Microsoft Entra ID and Intune	Best IDP Integration "Microsoft Entra ID integrates with everything we have that supports an external IDP. The Cloud Identity Provider feature for SSO in Jamf Pro and the integration for Jamf Protect brings your corporate identities to your Jamf products and other third party services with ease." T Ellis
Cloud based identity for Mac	This allows for the end users at an organization to login to their Mac using their Entra ID.	Integrating with Microsoft Entra ID	Jamf Connect	Microsoft Entra ID and Intune	"Implementing was easy with the instructions given. SSO is a life changer." Tyler Verlato
