**Jamf for Education**

Connect, manage and protect Apple devices, apps and learning resources in education.

Jamf Apple Enterprise Management, optimized for education, empowers your student success. With tools for all stakeholders, from IT admins, to teachers, to students and parents.

With every Apple device, schools need to be able to seamlessly incorporate technology that drives teaching and learning initiatives by offering teachers and students secure access to the resources they need, empowering IT to deliver the functionality required in today's modern learn anywhere, anytime environment, and providing security with the peace of mind that devices, data and students are protected at all times — all while delivering an exceptional experience for every user.

Jamf is the only Apple Enterprise Management solution of scale that automates the entire lifecycle of Apple in education, including device deployment, management and security, without negatively impacting the end-user experience or requiring IT to touch the device. From the moment an Apple device is opened, to the day it gets refreshed for a new one, Jamf optimizes the end-to-end Apple enterprise experience for IT and end users.
A consistent, native Apple experience that empowers staff and students.

Zero-touch deployment

Deploy devices to any user, anywhere. Integrate with Apple Education deployment programs to automate enrollment and configuration. Provide a scalable experience with each device, personalized for each individual – without IT having to touch the device.

Identity-based access

Provision devices with education-critical applications based on user's cloud-identity credentials, complete with multi-factor authentication enabled for every login, and a single password that is synchronized down to the local account level.

Curated resources on demand

Empower users with your own branded Self Service app store or the Jamf School App. Give them the ability to install apps, update software and maintain their own device without a help desk ticket.

Inventory management

Automatically collect user hardware, software and security device data or customize inventory specifications. Leverage automated inventory data and dynamic Smart Groups to trigger actions like operating system upgrades.

Extended visibility

With dashboards, real-time alerts, and reporting on built-in Apple security frameworks like XProtect, Gatekeeper and MRT, you'll know when suspicious activities occur.

Device management

Through remote management and the use of configuration profiles, policies, smart targeting and scripts, you can leverage advanced workflows to automate Mac, iPad, iPhone and Apple TV management. With APIs and third party integrations, including Showbie, Explain Everything and Carousel, Jamf enhances the value of your existing technology stack.

Streamlined app management

Automate and secure your app environment. Jamf integrates with Apple School Manager, so you can effortlessly assign apps to users or devices. The Jamf App Catalog supports the most common third party apps, plus Mac-ready App Installers automates the entire app lifecycle – giving time back to the IT team.

Threat prevention and remediation

Receive real-time alerts on-device to analyze activity, then choose whether to proactively block, isolate or remediate threats. Prevent known macOS malware, including those threats and attacks unique to Apple's architecture.

Security management

Secure devices by leveraging native Apple security features such as enforcing encryption on macOS and iOS and passcodes on iOS, run policies to turn on FileVault for macOS, restrict malicious software and patch Apple devices.

Enhance teaching and learning by unlocking the power of Apple and Jamf today.
