

# Jamf Cloud Checklist

Ready to make the move?

Not sure if Jamf Cloud is right for you? That's OK.

We understand that moving your deployment from on-premise to a cloud-hosted environment is a big decision. Let us help you through it. This document highlights the key areas to consider when deciding if or when you should move to the cloud.

1

**To start, consider these technical aspects that will impact your migration:**

## Database

Verify you can export your database when migrating to the cloud environment.

## Email settings

Plan to safelist SMTP access to your mail server (*originating from Jamf Cloud*) if you will send alerts.

## SCEP profiles

Choose between static or dynamic challenge for SCEP payloads. Ensure you can provide public access to your SCEP server if choosing dynamic challenge. (*Jamf Cloud doesn't proxy SCEP requests or responses.*)

## File size limitations

Verify there are no files over 5TB. (*e.g. packages*)

### Distribution points and the JCDS

Make sure you understand the layout of distribution points and requirements for workflows. (e.g. *imaging*)

### Customized Tomcat and MySQL

Confirm that the standard set of options for Tomcat and MySQL in the Jamf Cloud environment will work for you.

### Database access

Verify you don't have any scripts that directly point to the SQL database.

## 2

**Now for the process. As you work through what's needed to make the move to Jamf Cloud, consider the following:**

### Software upgrades

Verify your on-premise upgrade process is compatible with Jamf Cloud's change control processes.

### QA/Testing environments

Inform support of your requirements for a QA/testing instance of Jamf Pro before purchasing. (*This may incur an additional charge.*)

## 3

**Your final step is evaluating any legalities that may hold up your move.**

### Licensing

Verify you can accept the most recent Jamf EUSLA and the Customer Database Services Agreement.

## Still aren't sure, or need some clarification?

No problem. We are here to help you make the best decision possible for your organization's need. Find us at [jamf.com/contact](https://jamf.com/contact) or visit [jamf.com/products/jamf-cloud](https://jamf.com/products/jamf-cloud) for more information about cloud-hosted device management.
