# Jamf Education Plans

Complete solutions let you deploy management and security together in a bundled breeze.

Create the ideal learning environment with the perfect plan for your needs. Simple, education-purposed management and security that offers admins and staff complete solutions with support to help every step of the way.

Jamf Education Enhanced plan

ᘓ jamf | SCHOOL   Purpose-built Apple MDM for schools

Classroom management
Fewer distractions, better learning. Offer total teacher management of all devices with the ability to block apps and web pages— and features such as spell check.

Mac and iPad
Manage your Mac and iPad devices with equal ease. Deploying, managing and securing Apple devices with everything users need for success has never been simpler.

Comprehensive dashboard
Keep track of managed devices, users and apps. See the status of devices quickly and remediate issues easily.

Location Support
Manage each location and its devices, users and groups separately, pushing down profiles and apps from a single location.

Jamf Safe Internet   Safe connections everywhere students learn

Network Threat Prevention
Prevent known threats to iPad and Mac, like malicious domains used in phishing attacks, using MI:RIAM — our machine learning engine.

Content Filtering
Create and customize the level of content control that fits each class to protect against harmful content on the internet.

Privacy first, Apple best
Leverage the latest DoH technology available on Apple platforms to prevent harmful content without invading the students privacy.
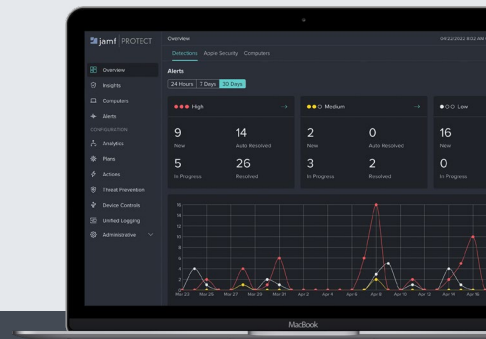

Better together
Integration with Apple, Chromebook and Windows devices brings content filtering and security to the whole fleet.

Elevate Mac security
with unmatched protection.

Upgrade to **the Jamf Education Ultimate plan** and add:

■ jamf | PROTECT   Built for Mac, to protect Mac

Endpoint security
Comprehensive detection and protection for Apple-specific malware and attacks. Data loss can be prevented with device controls to manage removable storage devices.

Compliance and visibility
Jamf Protect helps organizations with their device compliance goals through customizable benchmark reporting and logging rich telemetry data for comprehensive context into security events.

Alignment with Apple
Jamf Protect is built with Apple in mind, with consistent same-day support for Apple releases. Security teams can employ a single tool that defends against attacks in the modern security landscape.

Threat prevention
Extend your known threat prevention capabilities for Mac while Jamf Threat Labs helps threat-hunting teams detect unknown threats.

■ jamf | CONNECT   Reimagine user authentication

Account provisioning
Jamf Connect gives users the ability to access their Mac and applications with a single identity, without the need for multiple accounts and binding to Active Directory.

Identity management
Jamf Connect requires a cloud identity, giving IT admins the ability to monitor who is accessing devices, to use cloud admin permissions to service machines, and maintain security and compliance standards.

Password synchronization
Jamf Connect ensures a user's cloud-identity passwords are synchronized down to the local account level on the Mac, raising security and compliance standards across all devices and users.

With key identity provider integrations, Jamf Connect is the best way to manage accounts and authentication.
