

# Jamf for Mac

## Premium Onboarding

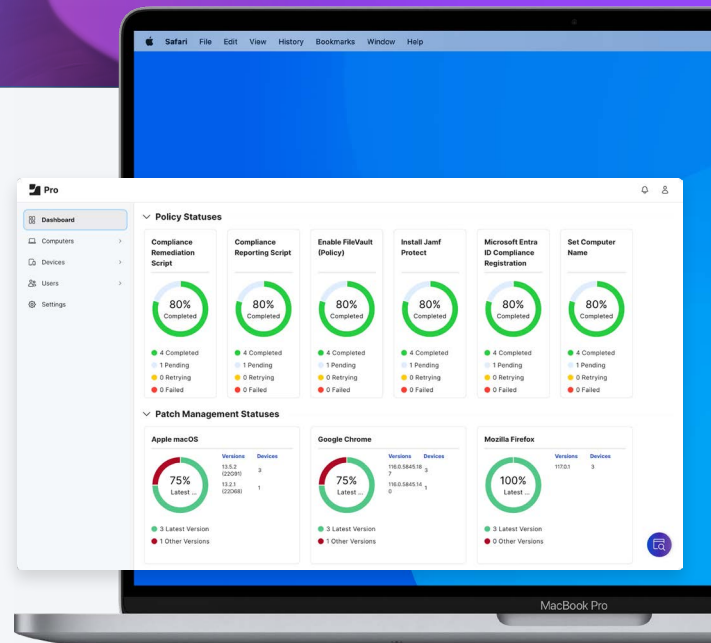

*Get expert help with your Mac environment — tailored to your organization*

### Jamf for Mac surpasses traditional mobile device management.

**Jamf for Mac** is an enterprise-grade solution that helps medium and large organizations integrate Apple computers into their existing ecosystems to operate reliably, securely and at scale. And its supporting services are powered by Jamf's platform of Apple-first capabilities.

The **Jamf for Mac Premium Onboarding** service is an intensive personalized consultation that takes into consideration the skill levels of the attendees and the complexity of their environment to get them started supporting Mac with Jamf.

Early guidance with Jamf products provides immediate benefits while setting the stage for long-term success. And it lays the groundwork for managing an Apple ecosystem within an existing enterprise network.

## Premium Onboarding helps you hit the ground running.

### Jamf Platform

**Accounts and authentication:** manage access and licensing for Jamf products, apps and tools

**Console dashboards, navigation and admin settings:** configure directory services and inventory frameworks, and integrate Jamf with Apple and other services

### Device Security

**Vulnerability management:** manage disk encryption, secure access to sensitive resources and configure access to removable storage

**Application controls:** allow or deny access to approved or unapproved apps

**Endpoint detection and response:** monitor for suspicious behavior and known malware, configure end-data storage for hosting log history and files, deploy access plan to computers and block local threats

**Threat remediation:** identify computers needing remediation, alert users of incidents, quarantine compromised computers and gather forensic data for analysis

**Web content filtering and threat prevention:** identify content rules to block access to malicious websites, and configure policies to protect against phishing, malicious software and intrusion attempts

### Computer management

**Secure computer enrollment:** configure global management settings, local admin passwords, and user-initiated and zero-touch enrollment

**Mobile device inventory and reporting:** review and customize inventory details and create automated or on-demand reports

**Computer settings management:** issue remote commands, and configure inventory assessments, OS and app setting management, and automated workflows

**Software, account and self-service deployments:** configure automated and custom app and book deployment, printer deployment, user account management, remote script execution and self-service workflows

**Maintenance, including OS updates and patch management:** configure app patch management and OS updates, and review access and system log management

### Identity management

**Identity provider (IdP) support:** configure IdP settings, secure authentication and password management

**Computer role management:** configure role management at account creation and with an IdP, and demo privilege elevation

**Settings and software deployment:** deploy identity management settings and review options for Platform Single Sign-On

**Compliance management:** define and apply compliance baselines

**Zero-Trust Network Access (ZTNA):** configure secure access to organizational resources

## Manage. Secure. Maximize.

**Jamf Premium Onboarding** sets your organization up for success by optimizing your Mac environment. With expert guidance, your IT team will learn how make Jamf work for your company's unique needs — helping you get the most out of Mac while keeping devices and users safe, secure and productive.
