

Jamf for Mobile

Premium Onboarding

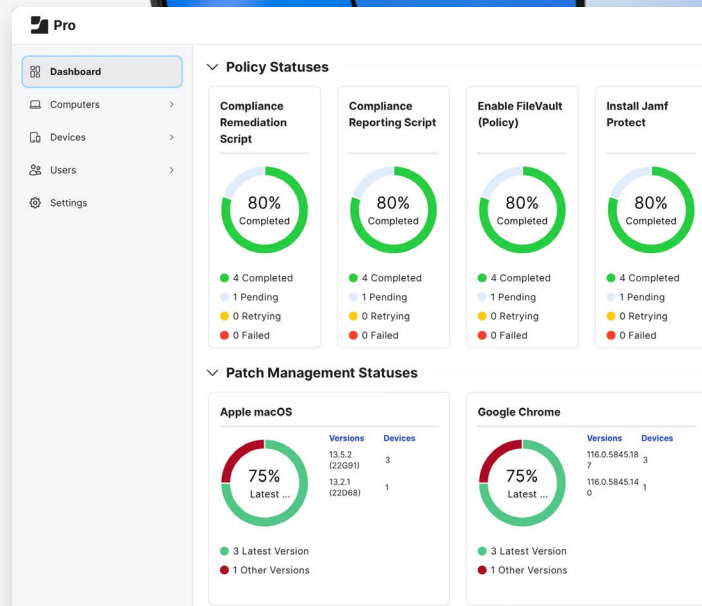

Get expert help with your mobile devices — custom-fit to your organization

Jamf for Mobile surpasses traditional mobile device management.

Jamf for Mobile is an enterprise-grade solution to help medium and large organizations integrate iPhone, iPad, Apple TV, Vision Pro and Android devices into their existing ecosystems to operate reliably, securely and at scale. And its supporting services are powered by Jamf's platform of Apple-first capabilities.

The **Jamf for Mobile Premium Onboarding** service is an intensive personalized consultation that takes into consideration the skill levels of the attendees and the complexity of their environment to get them started supporting mobile devices with Jamf.

Early guidance with Jamf products provides immediate benefits while setting the stage for long-term success. And it lays the groundwork for managing an Apple ecosystem within an existing enterprise network.

Premium Onboarding helps you hit the ground running.

Jamf Platform

Accounts and authentication: manage access and licensing for Jamf products, apps and tools

Console dashboards, navigation and admin settings: configure directory services and inventory frameworks, integrate Jamf with Apple and other services and configure Manager for Android

Secure access and threat prevention

Endpoint detection and response: configure end-data storage for hosting log history and files, and deploy access plans

Web content filtering and threat prevention: identify content rules to block access to malicious websites, and configure policies to protect against phishing, malicious software and intrusion attempts

Network relay configuration: configure policies for approved web apps and deploy security agent app

**AI Analysis is a cloud-only feature.*

Mobile device management

Secure computer enrollment: configure global management settings, Return to Service, and user-initiated and zero-touch enrollment

Mobile device inventory and reporting: review and customize inventory details and create automated or on-demand reports

Mobile device settings management: issue remote commands, and configure inventory assessments, OS and app setting management, automated workflows and cellular data policies

Software, account and self-service deployments: configure automated and custom app and book deployment, and self-service workflows

Maintenance, including OS updates and patch management: configure app patch management and OS updates, and review access and system log management

Identity management

Compliance management: define and apply compliance baselines, and configure conditional access

Zero-Trust Network Access (ZTNA): configure secure access to organizational resources

Manage. Secure. Maximize.

Jamf Premium Onboarding sets your organization up for success by optimizing your iPhone, iPad, Apple TV, Vision Pro and Android environment. With expert guidance, your IT team will learn how make Jamf work for your company's unique needs — helping you get the most out of your devices while keeping users safe, secure and productive.
