

Automate the vision of better care

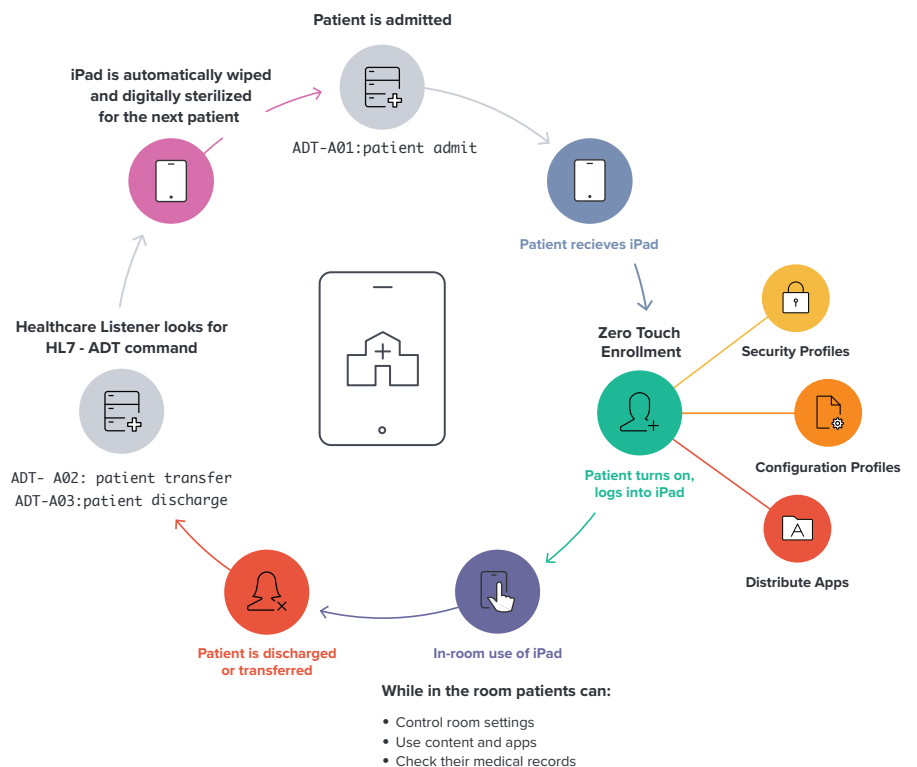

Deliver faster, more personalized care to patients

Give patients more control and a better overall experience by allowing them to see their medical records, close the blinds and call a nurse – all from an iPad that can be securely and remotely erased between patient visits.

Jamf’s healthcare solution: The only solution on the market to deploy and digitally sterilize iPad and Apple TV.

Healthcare Listener, included with Jamf Pro, is a secure Emergency Medical Record-EMR- integration that listens for HL7 ADT messages such as: Admit, Discharge, and Transfer. Healthcare Listener then uses these messages to automatically trigger various remote actions to Apple iOS and tvOS devices, allowing your devices to work exactly how patients need while in your care - no visit from IT required!

How it works: Automated Patient Workflow
