

Manage Mac in any environment

IT teams demand best-of-breed tools to deploy, secure, and report on every device in an enterprise environment. Microsoft's Systems Center Configuration Manager (SCCM, also known as ConfigMgr) is one such tool for managing Windows computers. But its capabilities are limited on the Mac.

Jamf Pro is the preferred enterprise choice for Mac management. It gives IT administrators a comprehensive management tool set for Mac and lets IT administrators manage Mac computers in a similar way to how Windows computers are managed with SCCM.

	SCCM WINDOWS	SCCM macOS	JAMF PRO macOS	
Microsoft SCCM Feature				Jamf Pro Feature
Alerts	●	●	●	Software Restrictions, Notifications
Application Catalog	●	●	●	Self Service
