Secure Communication and Improve Clinical Workflow with iPhone

Enhance the delivery of care with Vocera and Jamf.

## Check-in to the new era of healthcare

Today's healthcare workforce is increasingly mobile with more doctors, nurses and care providers using mobile devices to stay connected with each other and their patients. However, as more technology is introduced, hospitals must evolve their (all too often) fragmented workflows to find new and improved ways of streamlining communication and care coordination.

Additionally, a 2018 Healthcare Information and Management Systems Society (HIMSS) Analytics survey said the average care team member — physicians, nurses, health professional — must use up to five different devices or approaches to communicate and execute a defined plan of care.

This has led health systems to pursue a simpler, yet comprehensive clinical communication and collaboration platform that addresses hospital-wide challenges and provides a holistic experience from device to app to care provider/patient.

## Fixing a broken communication system

Vocera Edge is a cloud-based clinical communication and collaboration solution for smartphones that enhances care team mobility and simplifies the work at the point of care through effective, reliable communication and clinical workflows.

Enhance care team mobility and simplify the work at the point of care through effective, reliable clinical workflows with Vocera Edge. Nurses can document to the electronic health record (EHR) while receiving filtered, prioritized alarm and task notifications. Physicians can easily locate and communicate with the nurse and team members supporting their patients, saving time with each connection.

When communication and clinical workflows are unified, the care experience is transformed, empowering care teams to deliver better results. Vocera Edge is the only solution that enables both care collaboration and execution of clinical workflows in a single application. From making rounds on a hospital floor to handing off a patient to another provider, the Edge app streamlines communication-driven workflows to close the loop on care safely and efficiently.

## Setting hospitals up for success with Vocera Edge

With Jamf Pro, the gold standard for Apple management in healthcare, paired with Apple Business Manager, healthcare IT can leverage a zero-touch workflow to deploy iPhone at scale. Together, these systems ensure a smooth end-user experience without manual configuration on the device itself.

iPhone devices can be deployed straight out of the shrinkwrap with appropriate apps and security settings already installed — ensuring healthcare organizations mitigate risk associated with industry compliance standards like Health Insurance Portability and Accountability Act (HIPAA). For Cisco customers, Jamf Pro can mark Vocera Edge and other critical apps for Fastlane+ (Quality of Service), ensuring that clinical calls aren't dropped as a nurse or doctor roams a facility.

The Edge app can be pre-configured through Jamf Pro with managed app configuration, Apple's native framework for app configuration and security. This allows healthcare IT to avoid the need for app containers or bolt-on security tools, which hinder user experience, and at their worse, can break clinical workflows.

## Return on investment with Vocera Edge

With the right device, network and device management foundations in place, the Edge app can drive significant return on investment (ROI) for a healthcare institution by empowering your frontline care teams. Organizations with Edge deployed have reported:

**60 minute**

reduction in time spent on documentation, per nurse per shift

**75%**

improvement in urgent specimen collection response times

**60%**

reduction in medication errors

**80%+**

of clinicians agree the app improves their ability to communicate patient information

## The best way to deliver care.

Whether you're a part of a large hospital or small care facility, Vocera and Jamf can help you deliver a mobility solution that empowers nurses and clinicians to achieve better outcomes for patients.

**Put our solution to the test and see the benefits for yourself.**
