Streamline asset management with Teqtivity

Teqtivity IT Asset Management software simplifies asset tracking from purchase to disposal.

Teqtivity provides powerful asset tracking for businesses of all sizes.

Integrated with Jamf, Teqtivity lets admins automate endpoint creation and creates discrepancy reports between the ITAM solution and Jamf.

Teqtivity and Jamf synchronize to help admins:

- Have one source of truth for asset management
- Get a detailed view of devices and their assigned users
- View real-time reports about any discrepancies between Teqtivity and Jamf
- Automate the creation and assignment of assets in real time when they're enrolled in Jamf

Efficient asset management

Teqtivity's simple UI makes it easy to assign users and locations to an asset and to apply standards and business rules to your workflows. All types of assets — including accessories and consumables — can be tracked and reported through Teqtivity.

Teqtivity + Jamf

Teqtivity solves common IT headaches by removing ambiguity about the state of your assets. With visibility and control through the entire product lifecycle, admins can maximize the return on investment and keep track of all devices. Integrated with Jamf, Teqtivity pulls data through the Jamf API and allows assets to be dynamically created and assigned based on information from Jamf.

Harness the power of Jamf Pro and Teqtivity IT Asset Management

Visit the Jamf Marketplace for information on how Teqtivity integrates with Jamf Pro to make your asset tracking effortless.
