

Security Review

Get in Front of Your Security Requirements

Secure Your Apple Devices

Many organizations require devices meet certain restrictions in order to be compliant with government regulations. With that said, users don't want devices configured in a way that destroys the user experience. Jamf can help.

1

Best Practices for Your JSS environment

Secure your Jamf Software Server

2

Best Practices for your Apple Fleet

Secure your Apple clients

Security Review

Apple has a number of services that fully secure your Apple devices. These include FileVault for at-rest security, policy-driven management to meet your password and other security policies, and protection of data while being transmitted to and from servers. For those new to the platform, or for long-time Jamf Pro administrators looking to have their deployment vetted, the Security Review will give you the peace of mind your organization requires, without a lot of unnecessary policies that lock users down.

What's Included

Apple devices are among the most secure right out of the box. For those in need, Apple provides a number of additional security features to help harden your deployment. Not all of these are right for all environments. This is why Apple gives a number of features that can be enabled to bring a new level of security to your environment. Wading through all the options, and verifying that you're using the right ones can be daunting. But, that's why we're here to help.

The Jamf Security Review gives you the following:

Scanning a subset of your hosts for known vulnerabilities

Review policies and how they impact usability of Apple devices

Best practices review to ensure devices meet with common security requirements

Infrastructure security guidance

Apple platform management training

Compliance

Jamf Professional Services has been where you are now. We have helped Jamf Pro administrators secure large quantities of Apple devices, in some of the largest and most complicated environments in the world. If it's possible, we can do it.

And, we can help you to do the same things. Don't take the burden of proving your compliance or reviewing settings on your devices all by yourself if you don't have to. We have scripts, extension attributes, best practices, and the vaunted Jamf support team at our disposal. Get secure fast, and use us to do so!
