

Hospitality solutions with Jamf Now

As a member of the hospitality industry, you strive each and every day to put people first — guests, coworkers, and team members alike. You look to create a sense of ‘home away from home’ through every action and provide the comfort that comes with achieving these goals. To serve a world of guests, it takes a complete team, on the same page, with modernized processes and tools to shape a modern hospitality industry.

As people’s expectations for their experience change, many hotels, casinos and hospitality providers are onboarding Apple devices to change with their guests. Optimizing operations such as requests, check in/out experience, guest interactions and assistance, producing a differentiated guest experience, and keeping internal teams informed and engaged through training and daily updates are major aspects Apple devices are capable of improving. Unifying Apple devices with a mobile device management platform like Jamf Now helps make those changes as seamless as possible, and opens the door for creating a wonderful experience for your guests and employees.

Jamf Now Features:

Lost Mode

iOS devices show a lock screen message, are disabled and show their location.

Remote lock and wipe

Disable the device until the passcode is applied or remotely wipe the data.

Single App Mode

Lock a device into a single app to focus on a specific purpose.

App Upgrade/Deployment

Update/deploy apps from a central location to enable your team with the exact apps they need.

App Usage

Ability to choose which apps are available, hidden, removed, or limited in order to focus device usage.

Apple TV Management

Jamf Now can help manage the full Apple ecosystem including Apple TV.

Sound familiar? We can help!

When it comes to reshaping the way you use technology, the task can seem daunting. But it shouldn't be. Finding what works best for your organization should be a combination of best practices and a plan that fits your team's needs and device usage.

Problem

Devices leave the property and are lost or damaged

Devices needed for specific purposes or kiosks

Different roles need different apps? Give your team exactly what they need

Concerned that employees will have too many apps that don't apply to them?

Information needs to be displayed digitally

Jamf Now solution

Workdays can get hectic and iOS devices can go missing. Help ensure your company data is protected. With Jamf Now you can disable and locate a lost iPad or iPhone device with Lost Mode. Or you can lock the device with Remote Lock capabilities then unlock it with a correct passcode or remotely wipe all of the data.

Make sure each device is updated with the apps and software needed to get the job done with secure app deployments. Efficiently deploy all apps using Jamf Now instead of one by one, so your team can focus on the task at hand.

Using Blueprints, update and deploy apps segmented into profiles that fit specific roles' needs. Concierge, maintenance, and management? Give each a device that comes fitted to their usage — all from a central location.

Customize your devices to show the exact apps and settings specific teams need and hide the rest to help rid your team of excess clutter and distraction.

Keep guests informed on daily events, news or local attractions, and employees informed of announcements and relevant information by providing digital signage through solutions like Carousel and Apple TV.
