

Manufacturing solutions with Jamf Now

Keeping an organization running smoothly in the manufacturing industry is no easy task. Manufacturing is a broad term that goes well beyond the plant floor, including offices, drivers, delivery, and more; all of which need attention. As manufacturing operations constantly keep one eye on the future, digital transformation initiatives, and efforts to become paperless, are driving growth. The team that brings this to life must be more than just a cog in a well-oiled machine; they are family, friends, and co-workers invested in the organization's success. Ensuring work is productive, safe and streamlined while communications are clear is a critical part of building and maintaining success.

Across the world, these goals are being achieved through the integration of technology. Real-time production numbers and processes data, improved worker safety and effective digital signage and communication simply scratch the surface of what mobile devices and technology are bringing to manufacturing. However, as powerful as this software and technology can be, not all of it is easy to use, deploy and maintain. Jamf Now is enabling companies to give workers the apps they need, helping put data in their hands and secure, manage and protect their investments into technology.

Jamf Now Features:

Lost Mode

iOS devices show a lock screen message, are disabled and show their location.

Remote lock or wipe

Disable the device until the passcode is applied or remotely wipe the data.

Single App Mode

Lock a device into a single app to focus on a specific purpose.

App Upgrade/Deployment

Update/deploy apps from a central location to enable your team with the exact apps they need.

App Usage

Ability to choose which apps are available, hidden, removed, or limited in order to focus device usage.

Apple TV Management

Jamf Now can help manage the full Apple ecosystem including Apple TV.

Sound familiar? We can help!

When it comes to reshaping the way you use technology, the task can seem daunting. But it shouldn't be. Finding what works best for your organization should be a combination of best practices and a plan that fits your team's needs and device usage.

Problem

Devices leave the property and are lost or damaged

Devices needed for specific purposes or kiosks

Different roles need different apps? Give your team exactly what they need

Concerned that employees will have too many apps that don't apply to them?

Information needs to be displayed digitally

Jamf Now solution

Work days can get hectic, iOS devices can be damaged or go missing. Activate Lost Mode and the iOS device receives a customized lock screen message, is disabled from use and shows its location. You can also remotely lock or wipe a device.

Devices with specific purposes, like ones put on the manufacturing floor, can be locked into the app they need. Using Single App Mode can help increase security and restrict access to the rest of the device.

Using Blueprints, update and deploy apps segmented into profiles that fit specific roles' needs. Floor manager, foreman, health and safety? Give each a device that comes fitted for their usage — all from a central location.

Customize your devices to show the exact apps and settings specific teams need and hide the rest to help rid your team of unnecessary clutter and distraction.

Combine Apple TV with Jamf Now to create a digital signage solution guaranteed to engage your team through live production metrics or curated communications created and deployed from a central location.
