

LifeSaver Mobile Integration with Jamf

Keep employees safe from distracted driving accidents without installing expensive hardware

Protect your employees from distracted driving accidents

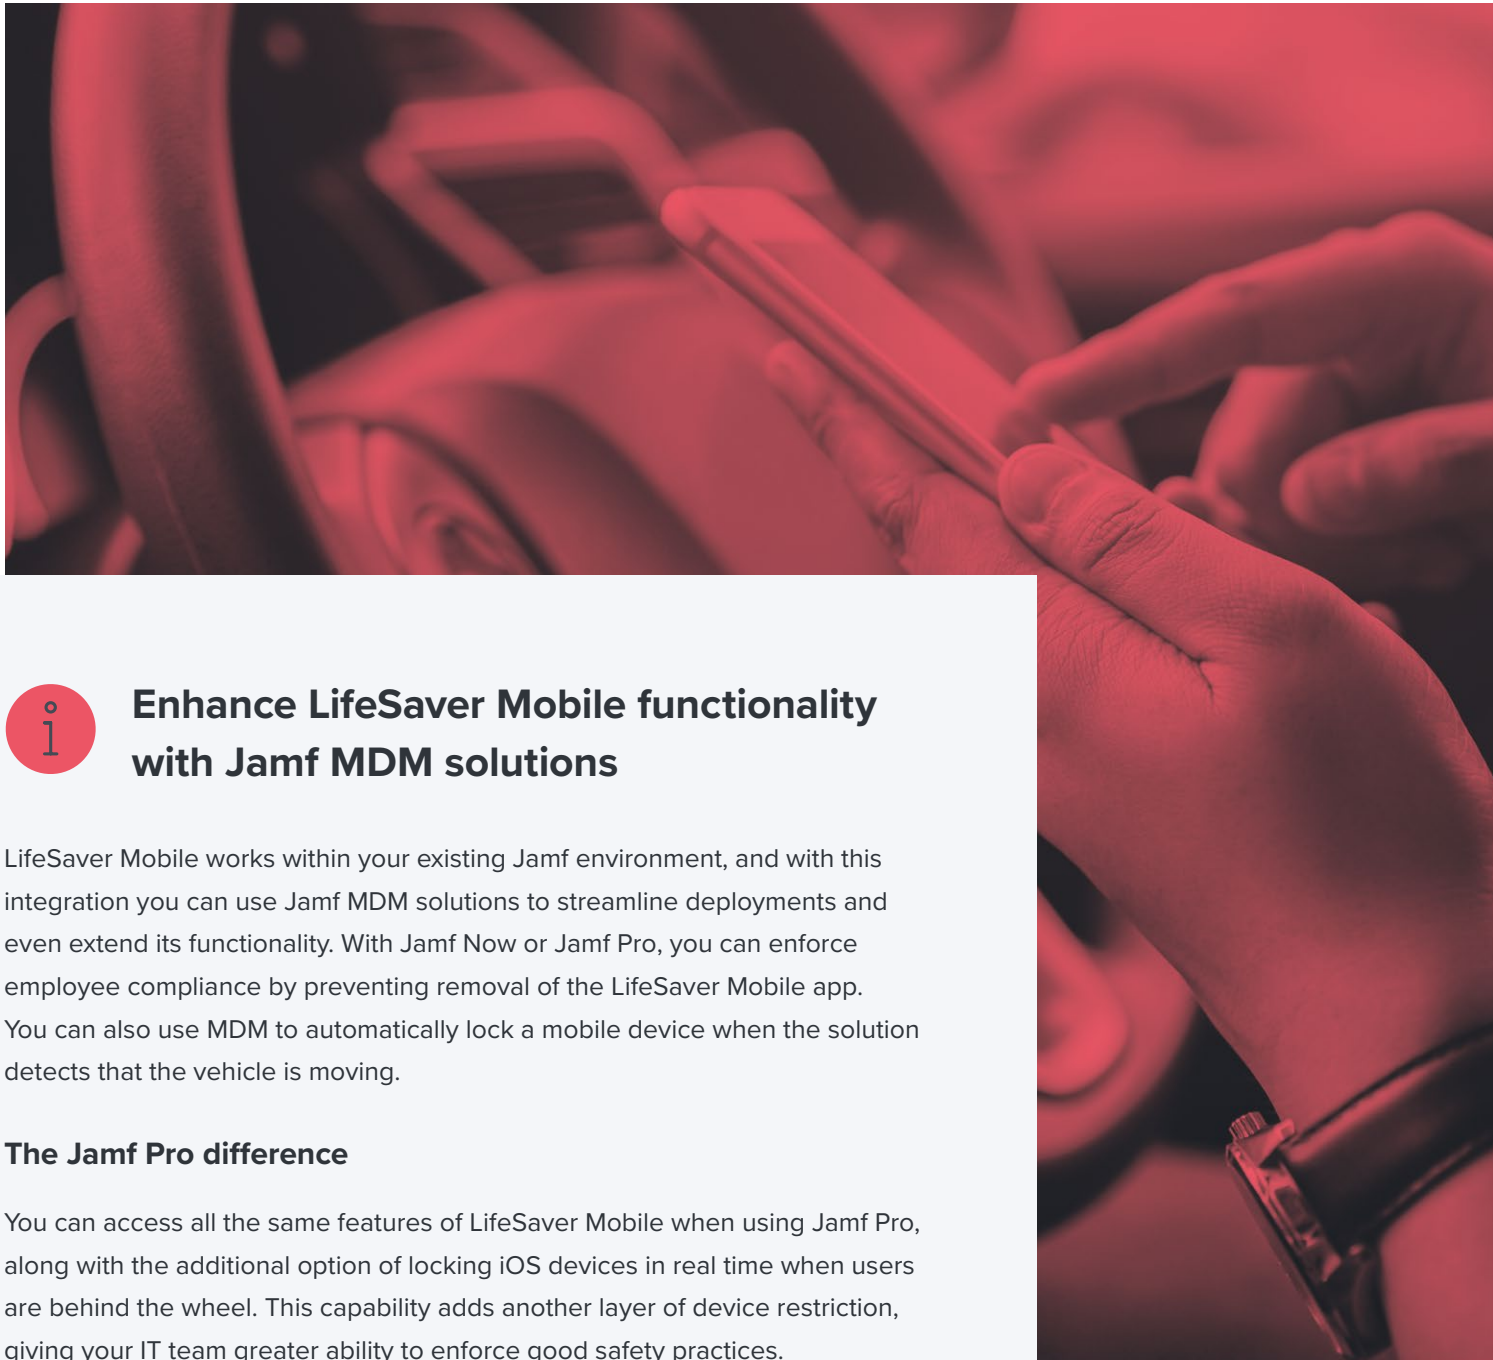

Insurance studies **indicate** that distracted driving is the leading cause of vehicle collisions nationwide, and **almost 40%** of workplace-related fatalities result from transportation incidents. Preventing distracted driving is one of the most effective ways you can promote a culture of workplace safety, but enforcing control of mobile devices in company and personal vehicles can be a challenging endeavor.

Now it's easy to protect your employees and other drivers when you use LifeSaver Mobile, a mobile app that automatically detects when employees start driving and notifies managers when they access a mobile device. Easy to deploy and to tailor to your company's needs, this solution offers a no-hassle way to maintain safety on the road. By reducing the occurrence of distracted driving, you can also maintain productivity while dodging higher insurance premiums and potentially devastating lawsuits.

Dispense with expensive and difficult hardware installation

Most corporate anti-distracted driving measures involve updating the company's transportation fleet with hardware such as cameras, dongles or beacons to track when employees are driving. This is a time-consuming and expensive procedure, not to mention impractical for personal or rental vehicles. LifeSaver Mobile offers a 100% software solution that you can deploy rapidly over the air to mobile devices – ready out of the box with nothing to install!

Enhance LifeSaver Mobile functionality with Jamf MDM solutions

LifeSaver Mobile works within your existing Jamf environment, and with this integration you can use Jamf MDM solutions to streamline deployments and even extend its functionality. With Jamf Now or Jamf Pro, you can enforce employee compliance by preventing removal of the LifeSaver Mobile app. You can also use MDM to automatically lock a mobile device when the solution detects that the vehicle is moving.

The Jamf Pro difference

You can access all the same features of LifeSaver Mobile when using Jamf Pro, along with the additional option of locking iOS devices in real time when users are behind the wheel. This capability adds another layer of device restriction, giving your IT team greater ability to enforce good safety practices.

How LifeSaver Mobile works

Restrict mobile devices while driving

LifeSaver Mobile is a mobile application that you can deploy to your employees' smartphones and tablets. It automatically detects when a user is driving and places their mobile device into a restricted mode to eliminate opportunities for distraction. At the end of the drive, the app seamlessly returns the device to normal operation.

Multiple levels of security with iPhone DND

The app complements the iPhone's built-in Do Not Disturb (DND) lock screen feature for driving. When an employee attempts to access the phone by pressing the "I'm not driving" prompt, LifeSaver Mobile determines whether the vehicle is in motion and prevents access if it is, registering a violation in the process.

Cloud-based control by your IT team

The LifeSaver Mobile cloud-based fleet portal gives your IT admins a centralized space in which to administer the program, including monitoring and even locking employee phones in real time when necessary.

Praise from a corporate customer

"We've seen a 50% drop in annual fleet insurance claims after we started using LifeSaver Mobile. Our drivers are now fully aware that we take this seriously and we're all in this together."

Steve B., VP-MIS
Industry: Construction Wholesale
Employees: 700 employees

Flexibility to protect employee privacy and usability

Your employees' privacy and convenience are worth taking into consideration, especially when they are using BYOD devices after working hours. You can integrate LifeSaver Mobile with your scheduling solution to only enforce safe driving policies when drivers are on the clock, not bothering them on off hours, weekends and vacations.

Exception reporting for accountability

Every time a driver attempts to bypass the lock screen or access restricted content, LifeSaver Mobile logs an exception. It subsequently sends an exception report either in real time or at the end of the day to the employee's manager for review. When you turn on the Driver Daily Digest feature, the driver also is notified of violations and may take self-directed corrective actions.

Easy deployment over the air

Deploy the app centrally to company-issued mobile devices to make it available out of the box, and send it remotely to BYOD (bring your own device) devices.

Let **LifeSaver Mobile** change your safety culture with distracted driving technology!
