

Transform the patient experience.

An iPad away from better care.

Through industry-leading mobile healthcare solutions, Jamf enables organizations to transform the patient experience with Apple. Using Jamf Pro to manage iPads, iPhones and Apple TVs allows providers to deliver faster, more personalized care while simultaneously improving communications within their care teams, all while keeping patient information secure. And with vast functionality on the device, patients have more control throughout their stay, creating a better overall experience. The healthcare landscape is changing. It's anew world, and it's possible with Jamf.

PUT PATIENTS FIRST

With iPad paired with an Apple TV, patients can see their medical records, close the blinds, call a nurse and play their favorite games – all without leaving their bed.

MEET SECURITY REQUIREMENTS

Ensure patient information is secure while meeting all regulatory requirements, such as HIPAA, via device restrictions, enforcement of security policies and automatic remote wiping between patients.

See what's possible with mobile healthcare solutions.

Inherently intuitive and packed with power, Apple devices are changing lives in healthcare. At Jamf, we're excited to help you engage, educate and entertain patients, transforming the patient bedside experience as we know it today.

ZERO-TOUCH DEPLOYMENT

Jamf integrates with Apple's Device Enrollment Program so you can automatically enroll and configure new iPad devices or setup Apple TVs remotely. Get hundreds of devices configured, managed and deployed in minutes.

HEALTHCARE LISTENER

Are you worried about how you are going to wipe and enroll the devices in between the discharge of one patient and the admittance of another? No problem. Jamf Pro has a unique Healthcare Listener built into its workflow. Listening for an HL7 command, Jamf Pro automatically triggers a remote action to digitally sterilize a patient bedside device after patient discharge. No room visit from IT required!

REMOTE MANAGEMENT

Ongoing management of all your devices is a breeze with configuration profiles, policies and smart targeting. With the ability to automate these tasks remotely, you stay current, in compliance and secure... always.

HEALTHCARE COMPLIANCE

Jamf Pro allows you to set security policies and monitor the health of your environment. Generate reports to demonstrate compliance with security standards (such as HIPAA) — an ability that helps mitigate regulatory compliance risks while streamlining audits.

JAMF IN ACTION: MAKING AN IMPACT AT UCSD

Opened in November 2016, UC San Diego (UCSD) Health's Jacobs Medical Center became the first hospital to equip all 245 of its patient rooms with an iPad and Apple TV. With its goal to transform the patient experience by engaging and communicating patient health information through hospital-supplied iPads, UCSD uses Jamf to make its vision a reality.
